*The 5 Supplements Every Parent Over 35
Actually Needs (and the 4 to Throw Out).*

THE BUSY STRONG SUPPLEMENT GUIDE

BUSYSTRONG90.COM · @_COACHMILOS

BUSY STRONG 90

Get Strong. Stay Busy.

FIELD NOTES · CHAPTER ONE

Why most parents waste €100 a month.

Most of what you've been sold in the supplement aisle is marketing dressed as medicine.

I've spent fifteen years inside the supplement industry — first as a competitive bodybuilder trying every powder, pill, and pre-workout on the market, then as a coach watching busy parents do the same thing.

Here is what fifteen years taught me: **five supplements actually move the needle.** Everything else is a slow leak in your bank account dressed up with a chrome label.

This guide is short on purpose. It is what I would tell my own brother if he had two kids, a business, and twenty-two minutes to train. No fluff. No affiliate links. No B-vitamin cocktail named after a Greek god.

"The supplement industry is a tax on parents who don't sleep enough."

THREE RULES BEFORE WE START

One. Food first. A supplement supplements a diet — it does not replace one. If you're eating 60 grams of protein a day, no powder on earth saves you.

Two. Test before you stack. A cheap blood panel beats a cupboard full of guesswork.

Three. Buy from a pharmacy or a clean, third-party-tested brand — not from an Instagram ad.

CHAPTER TWO

The Five Essentials.

Take these five for twelve weeks. Track your sleep, energy, and lifts. Then judge for yourself.

Nº	NAME	PRIMARY BENEFIT	DOSE
1	Creatine Monohydrate	Strength · brain · recovery	5 g daily
2	Vitamin D3 + K2	Hormones · mood · immunity	4000 IU + 100 mcg
3	Magnesium Glycinate	Sleep · cramps · stress	300-400 mg, pre-bed
4	Omega-3 (EPA / DHA)	Joints · brain · inflammation	2 g daily, with food
5	Whey Protein Isolate	Closes the protein gap	20-30 g as needed

The deep dives are on the next pages. Read them once. Apply them forever.

ESSENTIAL № 1

Creatine Monohydrate.

The most-studied supplement in human history. Cheap. Boring. Works.

Creatine increases the energy your muscles produce in short, hard efforts. For a busy parent that means **heavier lifts in the same 22 minutes**, better recovery between sessions, and — research increasingly suggests — sharper thinking on broken sleep. (You have children. This matters.)

Rx · Coach Milos Protocol

Form: Creatine monohydrate. Plain. No “HCl,” no “buffered,” no “elite” label.

Dose: 5 g daily, every single day. No loading phase needed.

Timing: With any meal. Consistency beats timing.

Watch for: 1–2 kg of water weight in the first fortnight. Normal. Not fat.

ESSENTIAL № 2

Vitamin D3 + K2.

If you work indoors, you are probably deficient — and that deficiency is quietly wrecking your hormones.

Vitamin D drives testosterone in men, hormonal balance in women, mood, immunity, and bone density. K2 directs calcium into your bones rather than your arteries — which is exactly why the two belong together.

Rx · Coach Milos Protocol

Dose: D3 4000 IU + K2 (MK-7) 100 mcg daily.

Timing: With the fattiest meal of your day — it is fat-soluble.

Test: Ask your GP for 25-OH Vitamin D. Aim for 50–80 ng/mL.

Watch for: Cheap brands that skip the K2. Don't buy them.

ESSENTIAL № 3

Magnesium Glycinate.

If you wake at 3 a.m. and can't fall back asleep — this fixes a large share of those nights.

Roughly seven in ten adults run low on magnesium. The deficit shows up as poor sleep, muscle cramps, restless legs, irritability, and a stress response that won't switch off. The glycinate form is the gentlest on the stomach and the best absorbed.

Rx · Coach Milos Protocol

Form: Magnesium glycinate or bisglycinate. Avoid oxide — it is a laxative.

Dose: 300–400 mg, taken 60 minutes before bed.

What changes: Deeper sleep within the first three nights.

Watch for: Don't take it alongside calcium — they compete to be absorbed.

ESSENTIAL № 4

Omega-3 (EPA / DHA).

Joint aches, brain fog, low mood. Most parents over 35 are running a slow, silent fire.

The omega-3 fatty acids EPA and DHA lower systemic inflammation, support brain function and mood, and protect joints from the wear of strength training. If you don't eat fatty fish twice a week, you need this.

Rx · Coach Milos Protocol

Dose: 2 g combined EPA + DHA daily — read the label, not all “1000 mg fish oil” is equal.

Timing: With food, ideally your largest meal.

Quality: Third-party tested. Cheap, oxidised fish oil does harm, not good.

Vegetarian: Algae-derived EPA/DHA — use a slightly higher dose (3 g).

ESSENTIAL № 5

Whey Protein Isolate.

Not magic. Just a tool. Use it when food fails — not as the default.

Whey isolate is the cleanest, fastest-digesting protein we have. If you can hit 1.6 g of protein per kg of bodyweight from whole food — skip it. If your week is meetings, school runs, and sandwiches grabbed on the move — keep a tub at home and one at work.

Rx · Coach Milos Protocol

Form: Whey isolate — not concentrate, not a vague “blend.”

Dose: 20-30 g per scoop, used to close protein gaps in the day.

Timing: Whenever it is needed. Post-training is optional, not magical.

Plant-based: A blend of pea + rice protein does the same job.

THE STACKS

Choose your goal. Stack accordingly.

GOAL	YOUR STACK
Fat Loss	Creatine · D3+K2 · Magnesium · Omega-3 · (Whey as needed)
Strength / Muscle	Creatine · D3+K2 · Magnesium · Omega-3 · Whey (1.6 g/kg)
Sleep & Recovery	Magnesium · Omega-3 · D3+K2 · (Glycine 3 g pre-bed, optional)
Postpartum Mom	D3+K2 · Magnesium · Omega-3 · Iron (if tested low) · Whey

Postpartum mothers: always clear supplements with your OB or midwife first.

CHAPTER THREE

What to throw out.

Every euro you save here is a euro you can spend on real food.

SKIP — BCAAs

If you eat enough protein, branched-chain amino acids are already in your food. Powdered BCAAs are an expensive bottle of nothing.

SKIP — Fat Burners

Mostly caffeine and niacin in a chrome bottle. They make you jittery, not lean. A coffee and a walk do the same job for free.

SKIP — Test Boosters

No legal over-the-counter supplement meaningfully raises testosterone. Vitamin D, real sleep, and lifting heavy do.

SKIP — Detox Teas

Your liver and kidneys detox you around the clock, for free. A pricey tea is an insult to both organs.

SKIP — Pre-Workouts

A scoop is flavoured caffeine sand. Take a coffee, 3 g of salt, water and creatine instead — same energy, better sleep tonight.

CHAPTER FOUR

Test before you stack.

Before spending a single euro, find out where you actually stand.

Take this list to your GP and run a basic panel. Most of it is cheap. All of it tells you what your body is genuinely missing — so you supplement the real gaps instead of guessing.

- ◆ 25-OH Vitamin D — target 50-80 ng/mL
- ◆ Ferritin and a full iron panel — especially mothers and vegetarians
- ◆ B12 and folate — especially if vegetarian or constantly tired
- ◆ Magnesium — RBC magnesium is more accurate than serum
- ◆ Free testosterone — men over 35, if drive and energy feel low
- ◆ TSH with free T3 / T4 — thyroid drives energy and fat loss

“Test, don’t guess. The cheapest supplement is the one you didn’t need to buy.”

CHAPTER FIVE

A day on the stack.

Where each supplement fits into an ordinary parenting day. No alarms, no rituals — just attach them to things you already do.

WHEN	WHAT	WHY THEN
Breakfast	Vitamin D3 + K2 · Omega-3	Fat-soluble — needs food
Any meal	Creatine 5 g	Timing irrelevant; routine is not
Daytime gap	Whey 20–30 g (if short on protein)	Closes the protein gap
With dinner	Second Omega-3 (optional)	Splits dose, easier digestion
60 min pre-bed	Magnesium glycinate 300–400 mg	Drives deeper sleep

THE BUDGET TRUTH

Five things, not fifteen.

The five essentials are cheap precisely because they are not exciting. They simply work, quietly, for years. Excitement is what you are sold when a product cannot rely on results. Spend what you save on real food — another kilo of chicken, a carton of eggs, a bag of frozen berries. That trade, hype for groceries, does more for your body than any tub with a hologram lid.

“The basics, done for years, beat the exotic done for a fortnight.”

CHAPTER SIX

Honest questions, honest answers.

Q. Should I take all five right away?

A. Yes. They are not a “stack” in the bro sense — they fill basic deficits most parents already have. Run the full five for twelve weeks, track sleep and energy, then reassess.

Q. Is coffee a supplement?

A. Coffee is a tool. Two or three cups before 2 p.m. is fine — and it doubles as your pre-workout. After 2 p.m. it quietly eats your sleep.

Q. I’m breastfeeding — anything different?

A. D3, omega-3 and magnesium remain safe and important, but clear everything with your OB first. Be conservative with creatine if you prefer, though current evidence is reassuring.

Q. My partner takes 14 supplements. Should I argue?

A. Don’t argue. Hand them this guide. Then go and train.

You have the supplement guide.

Now build the body those supplements support.

The full 90-day system lives inside the Busy Strong 90 app.

3 workouts a week. 22 minutes each. Demonstrated, scheduled, done for you.
